The above table provides the 2009 reliability Grade Point Averages (GPAs) for many of the cars, sport-utility vehicles, and pickup trucks sold in North America. Each vehicle's GPA is an average of the ratings found within the tables of the Consumer Union's Consumer Reports: Used Car Buying Guide: 2009 and the April 2009 issue of the Consumer Reports magazine. The Reliable Two, Toyota Motor Corporation and Honda Motor Company, appear first in the table, because of their rather singular stature; the remaining manufacturers are listed alphabetically.

Letter grades are determined thusly: A if the GPA is 3.50 to 4.00, B if the GPA is 2.50 to 3.49, C if the GPA is 1.50 to 2.49, D if the GPA is 0.50 to 1.49, and F if the GPA < 0.50.

The method of computation of the GPAs is probably familiar to everyone who has attended college and nearly everyone who has completed high school (hopefully). A Grade Point of 4.00 (that is, an A) is given to a Consumer Reports "Much Better Than Average" rating, a GP of 3.00 (that is, a B) is given to a CR "Better Than Average" rating, a GP of 2.00 (that is, a C) to an "Average" rating, a GP of 1.00 (that is, a D) to a "Worse Than Average" rating, and a GP of 0.00 (that is, an F) to a "Much Worse Than Average" rating. A Grade Point Average (GPA) is an average of the Grade Points and is computed using Microsoft's Average(a:b,[c:d],...) function.

Note that the Average GPA is the average of the four 4-year GPAs.
